24-Hour Heartburn Relief is Possible.

Do you suffer from persistent heartburn on 2 or more days a week, even though you've treated it and changed your diet? It may be due to acid reflux disease, also known as GERD.

Looking for round the clock heartburn relief? For many people, just one pill a day of prescription NEXIUM can mean complete 24-hour relief from heartburn symptoms. Your results may vary.

NEXIUM. The Healing Purple Pill

But why is NEXIUM called the healing purple pill? Because NEXIUM can heal the erosions in your esophagus that may be caused over time by acid churning up from the stomach and wearing away the delicate lining of the esophagus. This condition is called erosive esophagitis, and only your doctor can determine if you have it. With NEXIUM, most erosions heal in 4 to 8 weeks. Your results may vary.

Don't wait. Take advantage of our Free Trial Offer. Print out your Free Trial Coupon and ask your doctor if NEXIUM—the healing purple pill—is right for you.

Get Your Free Trial Coupon Instantly! >

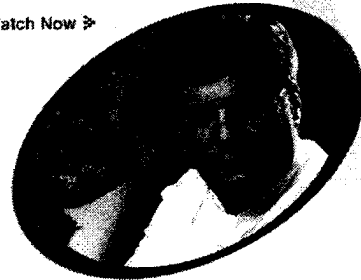

Pain Medication Users

If you are taking certain prescription or over-the-counter pain medications on a continuous basis you could be at risk.

NEXIUM is for the treatment of frequent, persistent heartburn symptoms due to acid reflux disease. These symptoms typically occur on 2 or more days per week despite treatment and diet change.

For many people, NEXIUM can also heal damage to the esophagus caused by acid reflux. This damage can occur over time, when acid from the stomach erodes (wears away) the lining of the esophagus. Only a doctor can determine if you have this condition, called erosive esophagitis. Most erosions heal in 4 to 8 weeks. Your results may vary.

Side effects with NEXIUM include headache, diarrhea, and abdominal pain. Symptom relief does not rule out other serious stomach conditions.

Please read the [important Product Information](#) and discuss it with your doctor.

Getting bad cholesterol down might just be a part of the equation

Watching what you eat and getting plenty of exercise are a great way to help get your bad cholesterol down. But what you may not know is that managing your cholesterol may also include getting your good cholesterol up. And that's where CRESTOR can help. Adding CRESTOR 10 mg, along with diet, can lower bad cholesterol by up to 52% (vs 7% placebo). It can also raise your good cholesterol by up to 14% (vs 3% placebo). Your results may vary. Find out more [about cholesterol](#).

[E-mail this page](#)

Important safety information about CRESTOR

CRESTOR is prescribed along with diet for lowering high cholesterol and has not been determined to prevent heart disease, heart attacks, or strokes. CRESTOR is not right for everyone, including women who are nursing, pregnant, or who may become pregnant, or anyone with liver problems. Your doctor will do blood tests before and during treatment with CRESTOR to monitor your liver function. Unexplained muscle pain and weakness could be a sign of a rare but serious side effect and should be reported to your doctor right away. The 40-mg dose of CRESTOR is only for patients who do not reach goal on 20 mg. Be sure to tell your doctor if you are taking any medications. Side effects occur infrequently and include muscle aches, constipation, weakness, abdominal pain, and nausea. They are usually mild and tend to go away.

Please see full [Prescribing Information](#) for CRESTOR.

[Important Safety Information](#) | [Ask Lilly ICOS](#) | [Privacy Statement](#) | [Terms Of Use](#)
[Healthcare Professionals](#) | [Prescribing Information](#) | [Patient Information](#) | [Glossary](#) | [Site Map](#)

©2006 Lilly ICOS LLC. All Rights Reserved. This site is intended for use by United States residents only.

CIALIS IS NOT FOR EVERYONE. Tell your doctor about your medical conditions and all medications, and ask if you're healthy enough for sexual activity. Don't take CIALIS if you take nitrates, often prescribed for chest pain, as this may cause a sudden, unsafe drop in blood pressure. Don't drink alcohol in excess (to a level of intoxication) with CIALIS, as this may increase your chances of getting dizzy or lowering your blood pressure. CIALIS does not protect against sexually transmitted diseases, including HIV.

The most common side effects with CIALIS were headache and upset stomach. Backache and muscle ache were also reported, sometimes with delayed onset. Most men weren't bothered by the side effects enough to stop taking CIALIS. As with any ED tablet, in the rare event of priapism (an erection lasting more than four hours), seek immediate medical help to avoid long-term injury. In rare instances, men taking prescription ED tablets (including CIALIS) reported a sudden decrease or loss of vision. It's not possible to determine if these events are related directly to the ED tablets or to other factors. If you have a sudden decrease or loss of vision, stop taking any ED tablet and call your doctor right away.

Individual results may vary. In clinical trials, CIALIS was shown to improve, up to 36 hours after dosing, the ability of men with ED to have a single successful intercourse attempt. CIALIS has not been studied for multiple sexual attempts per dose.

CIALIS is available by prescription only. For additional [safety information](#), talk to your doctor about this medicine and see the full [Patient Information](#).

Important Safety and Dosing Information

LEVITRA is a prescription medicine that is used to treat erectile dysfunction (ED). Men taking nitrate drugs, often used to control chest pain (also known as angina), should not take LEVITRA. Such combinations could cause blood pressure to drop to an unsafe level.

As with all ED drugs, there is a rare risk of an erection lasting longer than four hours. To avoid long-term injury, seek immediate medical attention. LEVITRA does not protect against sexually transmitted diseases. In rare instances, men taking PDE5 inhibitors (oral erectile dysfunction medicine, including LEVITRA) reported a sudden decrease or loss of vision in one or both eyes. It is not possible to determine whether these events are related directly to these medicines or to other factors. If you experience sudden decrease or loss of vision, stop taking PDE5 inhibitors, including LEVITRA, and call a doctor right away.

Discuss your medical conditions, including heart problems, and medications, including alpha blockers prescribed for prostate problems or high blood pressure, with your doctor to ensure LEVITRA is right for you and that you are healthy enough for sexual activity.

The starting dose of LEVITRA is 10 mg taken no more than once per day. Your doctor will decide the dose that is right for you. In patients taking alpha blockers, your doctor may start you on a lower dose of LEVITRA. In patients taking certain medications such as ritonavir, indinavir, ketoconazole, itraconazole, and erythromycin, lower doses of LEVITRA are recommended, and time between doses of LEVITRA may need to be extended.

In clinical trials, the most commonly reported side effects were headache, flushing, and stuffy or runny nose. LEVITRA is available in 2.5-mg, 5-mg, 10-mg, and 20-mg tablets.

Please see complete Prescribing Information for 2.5-mg, 5-mg, 10-mg, and 20-mg LEVITRA® (vardenafil HCl).

▶ [Get a Help Sheet](#)

Zelnorm is indicated for the treatment of patients (men and women) less than 65 years of age with chronic idiopathic constipation. Zelnorm has not been shown to work in men and women with chronic idiopathic constipation who are 65 years of age or older. Zelnorm is a medicine for the short-term treatment of women who have Irritable Bowel Syndrome with constipation (IBS-C) as their main bowel problem. Zelnorm doesn't work for all women and has not been shown to work in men with IBS with constipation.

Important Information

You should not take Zelnorm if you have a history of diarrhea, bad kidney disease or liver disease, gall bladder disease, intestinal blockage or adhesions. If you get new or worse abdominal pain, or blood in stool, stop taking Zelnorm and tell your doctor. Your doctor may need to do tests to find out if you have a serious problem. Headache and diarrhea were the most common side effects seen with Zelnorm. Stop taking Zelnorm if you get so much diarrhea that you get lightheaded, dizzy or faint. In studies, there were a few more reports of abdominal surgeries in patients taking Zelnorm than in patients taking placebo. No relationship between surgeries and Zelnorm was found.

Prevacid NapraPAC

If you have a history of stomach ulcers, reduce your arthritis pain with Prevacid NapraPAC and reduce the risk of stomach ulcers coming back.

Learn More

We speak your language.

Educators about acid reflux disease and Prevacid are now available in many languages.

What's Cooking?

Living with acid reflux disease doesn't mean depriving yourself. It means identifying trigger foods and avoiding them.

Is There a Prevacid That's Right for You?

The one that's a pill?
The one you can drink?
The one that melts in your mouth?

Put it to your acid test.

Important Safety Information for Prevacid

Prescription Prevacid is approved for GERD in children aged 1-17 years. Individual results may vary. Prevacid Capsules, Prevacid for Oral Suspension and Prevacid SoluTab (lansoprazole) Orally Disintegrating Tablets may not be right for everyone. Prevacid has a low occurrence of side effects in adults and children including diarrhea, abdominal pain, nausea, dizziness, constipation and headache. Symptom relief does not rule out other serious stomach conditions. The safety and effectiveness of PREVACID and Prevacid NapraPAC have not been established in pediatric patients.

Please see the complete [Prescribing Information](#) for more information and talk to your child's doctor.

If you suffer from persistent heartburn two or more days a week, despite treatment and diet changes, it could be acid reflux disease. Prescription Prevacid Capsules, Prevacid for Oral Suspension, and Prevacid SoluTab (lansoprazole) Orally Disintegrating Tablets are used for the treatment of acid reflux disease including erosive esophagitis, and may not be right for everyone. Your results may vary. Prevacid is generally well tolerated and has a low occurrence of side effects such as diarrhea, abdominal pain and nausea. Symptom relief does not rule out other serious stomach conditions. Talk to your doctor or healthcare professional to see if Prevacid is right for you. Prevacid products should not be crushed or chewed.

Please see the complete [Prescribing Information](#) for more information and talk to your doctor.

Important Safety Information for Prevacid NapraPAC (lansoprazole delayed-release capsules and naproxen tablets kit)

NSAIDs may increase the chance of a heart attack or stroke that can lead to death. Prevacid NapraPAC should not be used right before or after certain heart surgeries.

With any NSAID use, stomach or intestinal problems can occur without warning and can lead to death.

With prescription Prevacid NapraPAC, people with a history of gastric ulcer can continue treatment for osteoarthritis and rheumatoid arthritis, and reduce the risk of stomach ulcer from coming back. Your results may vary. Controlled studies lasted up to 12 weeks.

You should not take Naprosyn if you've had aspirin-sensitive asthma or allergic reactions to aspirin or other arthritis medicines. In rare cases, continued use of arthritis medicines may lead to serious stomach problems, such as bleeding, without warning signs. You should not take Naprosyn if you are taking other medications containing naproxen, such as Aleve® (naproxen sodium) or Anaprox® (naproxen sodium).

Tell your doctor if you have liver, kidney or fluid retention problems. Naprosyn should not be taken in late pregnancy. If you experience drowsiness or dizziness while taking Naprosyn, you should exercise caution when performing activities that require alertness.

The most frequently reported side effects of Naprosyn were constipation, heartburn, abdominal pain, nausea, headache, dizziness, drowsiness, itching, skin eruptions, bruising, ringing in the ear, excess fluid in tissues, and shortness of breath.

Prevacid has a low occurrence of side effects such as diarrhea, abdominal pain and nausea. Other serious stomach conditions may still exist.

Prevacid NapraPAC should only be used exactly as prescribed.

Please see the complete [Prescribing Information](#) and medication guide for Prevacid NapraPAC for more information and talk to your doctor.

Naprosyn and NapraPAC are trademarks of Syntex Pharmaceuticals International Ltd. Aleve and Anaprox are not trademarks of TAP Pharmaceutical Products Inc.

SINGULAIR is a prescription medicine approved to help control asthma in adults and children as young as 12 months and to help relieve the symptoms of indoor and outdoor allergies (outdoor allergies in adults and children as young as 2 years, and indoor allergies in adults and children as young as 6 months).

SINGULAIR will **NOT** replace fast-acting inhalers for sudden symptoms. You should still have rescue medication available and continue to take your other asthma medications unless your doctor tells you to stop. For asthma, SINGULAIR should be taken once a day, in the evening as prescribed, whether or not you have asthma symptoms. If your symptoms get worse or you need to increase the use of your rescue inhaler, call your doctor at once.

Side effects are generally mild and vary by age, and may include headache, ear infection, sore throat, and upper respiratory infection. Side effects generally did not stop patients from taking SINGULAIR. Check with your doctor if you're pregnant or nursing. SINGULAIR should be taken once a day, as prescribed. SINGULAIR is available by prescription only.

SINGULAIR has not been studied as a treatment option for both conditions in the same person.

This site is intended only for residents of the United States, its territories, and Puerto Rico.

[About CELEBREX](#)

[Understanding Arthritis and Pain](#)

[Choosing a Pain Reliever](#)

[Working With Your Doctor](#)

[Resources](#)

You don't have to plan around your arthritis pain.

Just one CELEBREX can provide 24-hour, all day and all night relief. CELEBREX is approved to treat the joint pain, stiffness, and swelling of osteoarthritis and adult rheumatoid arthritis. And CELEBREX was designed to target the source of joint pain. CELEBREX is one of the most studied arthritis medicines on the market. But CELEBREX, like all medicines, has both benefits and risks. That's why it's so important to talk to your doctor about all of your pain relief options. Your doctor may also suggest that you try other treatments. You may not be getting all the relief you need. Ask your doctor if prescription CELEBREX is right for your pain.

helpful answers

CL268381A3

Important Information: Like all prescription NSAIDs, such as ibuprofen and naproxen, CELEBREX may increase the chance of a heart attack or stroke that can lead to death. It should not be used right before or after certain heart surgeries.

Serious skin reactions or stomach and intestine problems, such as bleeding and ulcers, can occur without warning and may cause death.

Patients taking aspirin and the elderly are at increased risk for stomach bleeding and ulcers.

Tell your doctor if you:

- Are pregnant
- Have a history of ulcers or bleeding in the stomach or intestines
- Have high blood pressure or heart failure
- Have kidney or liver problems

People with aspirin-sensitive asthma or allergic reactions due to aspirin or other arthritis medicines or certain drugs called sulfonamides should not take CELEBREX.

Prescription CELEBREX should be used exactly as prescribed at the lowest dose possible and for the shortest time needed.

For more information about CELEBREX and other NSAIDs, please see the [Medication Guide](#). For further information on CELEBREX, please see the full [Prescribing Information](#).

helpful answers

Important Information:

LIPITOR is a prescription drug. It is used in patients with multiple risk factors for heart disease such as family history, high blood pressure, age, low HDL ("good" cholesterol) or smoking to reduce the risk of heart attack and stroke. When diet and exercise alone are not enough, LIPITOR is used along with a low-fat diet and exercise to lower cholesterol.

LIPITOR is also used in patients with type 2 diabetes and at least one other risk factor for heart disease such as high blood pressure, smoking or complications of diabetes, including eye disease and protein in urine, to reduce the risk of heart attack and stroke.

LIPITOR is not for everyone. It is not for those with liver problems. And it is not for women who are nursing, pregnant or may become pregnant.

If you take LIPITOR, tell your doctor if you feel any new muscle pain or weakness. This could be a sign of rare but serious muscle side effects. Tell your doctor about all medications you take. This may help avoid serious drug interactions. Your doctor should do blood tests to check your liver function before and during treatment and may adjust your dose. The most common side effects are gas, constipation, stomach pain and heartburn. They tend to be mild and often go away.

[Click here for LIPITOR Prescribing Information.](#)

When diet and exercise alone are not enough, adding LIPITOR can help. LIPITOR is one of many cholesterol-lowering treatment options that you and your doctor can consider.

ATTENTION PATIENTS AND CAREGIVERS:

There are other medicines that contain bupropion (the active ingredient in WELLBUTRIN XL). If your doctor prescribes WELLBUTRIN XL, it is important to make sure that you receive the correct tablets. [Click here to see WELLBUTRIN XL tablets](#)

Important Safety Information About WELLBUTRIN XL

WELLBUTRIN XL is not for everyone. There is a risk of seizure with WELLBUTRIN XL which increases with higher doses. Taking more than 450 mg/day increases the chance of serious side effects. Don't use it if you've had a seizure or eating disorder, or if you abruptly stop using alcohol or sedatives. Don't take with MAOIs, or medicines that contain bupropion. When used with a nicotine patch or alone, there is a risk of increased blood pressure, sometimes severe. To reduce risk of serious side effects, tell your doctor if you have liver or kidney problems. Other side effects may include weight loss, dry mouth, nausea, difficulty sleeping, dizziness, sore throat, constipation, or flatulence.

WELLBUTRIN XL is approved only for adults 18 years and over. In some children and teens, antidepressants increase suicidal thoughts or actions. Whether or not you are taking antidepressants, you or your family should call the doctor right away if you have worsening depression, thoughts of suicide, or sudden or severe changes in mood or behavior, especially at the beginning of treatment or after a change in dose (see Medication Guide: *What is important information I should know and share with my family about taking antidepressants?*).

Living with genital herpes can be a hassle. When you have a herpes outbreak, it can feel like it takes days out of your life. On this site, you'll learn how to still enjoy an active life with herpes. You'll also learn about VALTREX, the only once-daily medicine that can help reduce the number of your genital herpes outbreaks.

You may also have questions about spreading genital herpes to a partner. On this site you'll also learn how taking once-daily VALTREX, along with safer sex practices, can reduce the risk of spreading genital herpes. VALTREX is the only medication proven to reduce the risk of spreading genital herpes to a partner. It is not known if VALTREX reduces the risk of spreading genital herpes in same sex couples.

As you learn more about genital herpes and VALTREX, you'll realize that you can still enjoy an active life and take charge.

Important Information About VALTREX

VALTREX is for adults with healthy immune systems and is available by prescription only. There is no cure for herpes, and even with treatment, it may be possible to spread herpes. VALTREX may not prevent all recurrences.

If you are taking VALTREX to reduce the risk of spreading genital herpes, always use safer sex practices. This includes always using a condom made of latex and avoiding sexual contact when you have an outbreak or think you are about to get an outbreak. It is not known if VALTREX reduces the risk of spreading genital herpes in same sex couples.

While taking VALTREX for cold sores, you should not exceed one day of treatment, two doses taken 12 hours apart.

Tell your doctor if you have kidney problems because the dosage may need to be changed.

To avoid a potentially serious complication, tell your doctor if your immune system is not normal because of advanced HIV disease, bone marrow or kidney transplant. Common side effects include headache, nausea, vomiting, stomach pain, dizziness, cold, and sore throat.

Please see additional important information about [VALTREX® \(valacyclovir HCl\) Caplets \(PDF\)](#).

Fight Eczema

right where it starts.

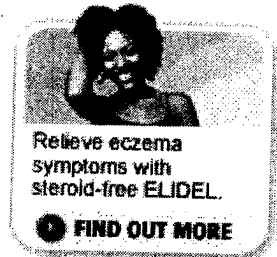

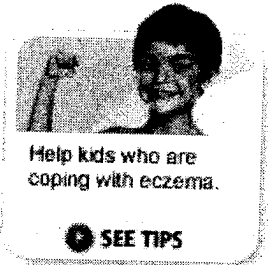

Coping with Eczema

For anyone suffering from it, eczema is a red, itchy skin rash that comes and goes. (See photos of eczema flare-ups.) While there is no cure for eczema, there are things you can do to help control it. [Find skin care tips](#) for dry, itchy skin, [learn about eczema treatment options](#), and more.

ELIDEL: Control of Mild to Moderate Eczema

ELIDEL is a prescription cream for people ages 2 and older who have mild to moderate eczema (atopic dermatitis). [Learn how ELIDEL can control the itching and redness of eczema.](#)

Important Safety Information

When you and your doctor find that other treatments aren't right for you or your child, your doctor may prescribe ELIDEL. ELIDEL is for mild to moderate eczema in adults and children 2 and older. Use ELIDEL for short periods when you, or your child, have symptoms, as directed by your doctor. Repeat as needed with breaks in between.

The safety of using ELIDEL Cream for a long period of time is not known. A very small number of people who have used ELIDEL Cream have had skin cancer or lymphoma. However, a link with the use of ELIDEL Cream has not been shown.

Because of this:

- Do not use ELIDEL Cream continuously for a long time
- Use ELIDEL Cream only on areas of your skin that have eczema
- Do not use ELIDEL Cream on a child under 2 years old

The most common side effects are a feeling of warmth or burning where applied, headaches, cold-like symptoms such as sore throat and cough, and rarely, viral skin infections. Limit sun exposure during treatment, even when ELIDEL is not on your skin.
